2.a File-Transfer

Im Text unter 2. auf „Filetransfer“ klicken/tippen (machen wir noch besser/schöner/auffälliger 😊)

In der Anmeldemaske folgende Angaben machen:

1. Host: **localhost**
2. Username: **notfallbox**
3. Password: (Default: **notfallbox**) Passwort des FTP-Benutzers (siehe [Setup SEC/FTP](#))

The screenshot shows a 'Login' window with two tabs: 'FTP' (selected) and 'SFTP/SCP'. Below the tabs are input fields for 'Host' (containing 'localhost'), 'Port' (containing '21'), 'Username' (containing 'notfallbox'), and 'Password' (containing '*****'). There is also an 'Initial Directory' field. Below these are three checkboxes: 'Passive mode' (checked), 'Use SSL (if supported)', and 'Keep me logged in'. At the bottom right is a 'Connect' button. The text 'Powered by Monsta FTP' is at the bottom left. Red, blue, and pink boxes highlight the Host, Username, and Password fields respectively. A red '1' is next to the Host field, a blue '2' next to the Username field, and a pink '3' next to the Password field. A blue '4' is next to the Connect button.

4. Button connect klicken/tippen
